

# Adventure West Virginia Retention and Graduation Assessment for 2013 to 2022 Fall Cohorts

Matthew G. Matyasovsky, PhD - Senior Research Analyst

Jessica Patti - Institutional Research Analyst II

Confidential Draft

#### **Introduction:**

The Adventure West Virginia Program (AWV) strives to foster personal growth, leadership development, social responsibility, and student success through adventure-based and experiential education programming at WVU. Like past analyses for the AWV program, students who participated in the AWV program in their first fall term as either a first-time transfer student or a first-time freshman are compared to their counterpart students who did not participate in the AWV program. Although costs of the program are not directly considered, the potential fiscal impacts of AWV regarding retention are demonstrated in Tables 4-6.

Data discussed in this report refer to AWV students and non-AWV students in the aggregate from 2013 to 2022 – unless otherwise defined – and comprise both first-time freshman and new transfers. As the data used in the current study is panel/longitudinal in nature, six-year graduation rates for the 2013 through 2017 AWV/Non-AWV cohorts were also examined. Recent findings demonstrate the positive effects of the AWV treatment on student performance via increased retention and graduation rates throughout the traditional six-year graduation timeline when compared to their non-AWV counterparts.

#### **Aggregate Retention Rate Comparison**

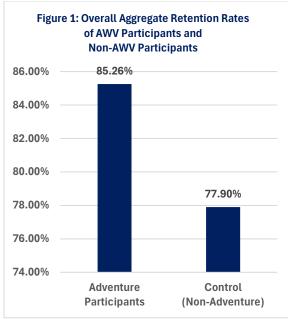

| Table 1: Aggregate Retention Rates of AWV Participants and<br>Non-AWV Participants by Student Type<br>Fall 2013 to Fall 2022 |                           |                            |                     |  |  |  |  |  |  |
|--|---------------------------|----------------------------|---------------------|--|--|--|--|--|--|
| Student Type   | Adventure<br>Participants | Control<br>(Non-Adventure) | Adventure<br>Effect |  |  |  |  |  |  |
| Resident   | 89.37%                    | 79.71%                     | +9.66%              |  |  |  |  |  |  |
| Non-Resident   | 83.31%                    | 76.38%                     | +6.93%              |  |  |  |  |  |  |
| Female   | 87.41%                    | 79.54%                     | +7.87%              |  |  |  |  |  |  |
| Male   | 83.08%                    | 76.31%                     | +6.77%              |  |  |  |  |  |  |
| Low EFC  | 77.14%                    | 70.21%                     | +6.93%              |  |  |  |  |  |  |
| Medium EFC   | 84.21%                    | 76.79%                     | +7.42%              |  |  |  |  |  |  |
| High EFC   | 88.09%                    | 83.95%                     | +4.14%              |  |  |  |  |  |  |
| OVERALL  | 85.26%                    | 77.90%                     | +7.36%              |  |  |  |  |  |  |

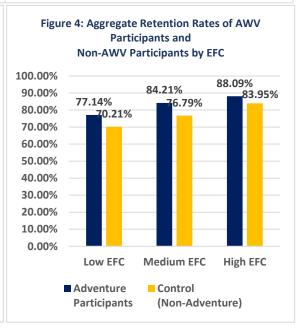

#### Figures 1-4: Aggregate Retention Comparison by Adventure West Virginia Participation

### **Adventure West Virginia Retention Impact**

- For students who do not participate in Adventure West Virginia, 77.9% retain to their second year (see Table 1 and Figure 1).
- For students who do participate in Adventure West Virginia, 85.3% retain to their second year (see Table 1 and Figure 1).
- Logistic regression reveals that Adventure West Virginia students are 1.313 times as likely as non-adventure students to retain to the following fall term (second year) while controlling for the student's academic index, at-risk status, residency, gender, EFC, and under-represented minority status.
  - o The odds ratio for adventure participants is 1.313 (95% CI 1.21, 1.42).
  - An odds ratio greater than 1.0 suggests that participation in the Adventure West Virginia program is associated with increased odds of retaining to the second year.
  - More specifically, the odds of being retained is 31.3% higher for adventure students when compared to non-adventure students.
- The relative risk (defined as the retention rate of participants divided by the baseline retention rate of non-participants) is equal to 1.095 or 9.5% and suggests that an adventure student is 9.5% more likely to retain to their second year when compared to a non-adventure student.
  - Example: If 78 out of 100 non-participants are expected to retain then we might expect 85 out of 100 adventure participants to retain, on average.
    - Calculation: 85 students result from taking the baseline expected value of 78 and multiplying by 1.095 or (78+(78\*1.095)) = 85.
- In summary, the 1.313 odds ratio demonstrates a strong positive relationship between the Adventure West Virginia treatment and the odds of retention.
- In summary, the relative risk of 1.095 provides evidence that the Adventure West Virginia treatment increases the probability of a AWV student retaining by 9.5% when compared to a non-AWV student.
- *Key Improvement*: AWV resident students retain at a rate of 9.7% points higher than non-AWV resident students (see Table 1 and Figure 2).
- *Key Improvement*: AWV Female students retain at a rate of 7.9% points higher than non-AWV female students (see Table 1 and Figure 3).
- *Key Improvement*: AWV Medium EFC students retain at a rate of 7.4% points higher than non-AWV medium EFC students (see Table 1 and Figure 4).

#### **Adventure West Virginia Graduation Impact:**

- For students who do not participate in AWV, 59.9% graduated within six years (see Table 2).
- For students who participate in AWV, 68.96% graduated within six years (see Table 3).
- In the aggregate for first-time freshman and transfers analyzed, students who participated in AWV displayed increased graduation rates across all three categories examined: residency, gender, and expected total family contribution (EFC) (see Table 3).

| Table 2      | Table 2: Summary Graduation Rates of Non-AWV Students |                        |                        |                        |                        |  |  |  |  |  |

- Logistic regression reveals that AWV students are 1.201 times as likely as non-AWV students to graduate within six years.
  - o The odds ratio for adventure participants is 1.201 (95% CI 1.103, 1.308).
  - An odds ratio greater than 1.0 suggests that participation in the Adventure West Virginia program is associated with increased odds of graduating within six years.
  - More specifically, the odds of being retained is 20.1% higher for adventure students when compared to non-adventure students.
- The relative risk (defined as the six-year graduation rate of participants divided by the baseline six-year graduation rate of non-participants) is equal to 1.152 or 15.2% and suggests that an adventure student is 15.2% more likely to graduate in six-years when compared to a non-adventure student.
  - Example: If 60 out of 100 non-participants are expected to graduate within six years then we might expect 69 out of 100 adventure participants to graduate within six years, on average.
    - Calculation: 69 students result from taking the baseline expected value of 60 and multiplying by 1.152 or (60+(60\*1.152)) = 69.
- In summary, the 1.201 odds ratio demonstrates a strong positive relationship between the AWV treatment and the odds of six-year graduation.
- In summary, the relative risk of 1.152 provides evidence that the AWV treatment increases the probability of a AWV student graduating in six years by 15.2% when compared to a non-AWV student.
- *Key Improvement*: In the aggregate, resident AWV students saw a 11.4% percentage point increase in their six-year graduation rates when compared to resident non-AWV students (see Table 3).
- *Key Improvement*: In the aggregate, female AWV students saw a 15.2% percentage point increase in their six-year graduation rates when compared to female non-AWV students (see Table 3).
- *Key Improvement*: In the aggregate, high EFC students saw a 8.7% percentage point increase in their six-year graduation rates when compared to high EFC non-AWV students (see Table 3).
- *Key Improvement Overall*: AWV students graduated at a rate of 9.1% points higher than non-AWV students (see Table 3).
